

## **Data reporting**

Standard turnaround time is 3 weeks. Turnaround time for rush samples is 7 business days. Please call ahead for turnaround times for sample quantities exceeding 30, or for rush samples requiring a turnaround time shorter than 7 business days.

The reported  $^{14}\text{C}$  age is corrected for isotope fractionation. The error is quoted as one standard deviation and reflects both statistical and experimental errors. Standard deviations for full size samples of Holocene are typically around  $\pm 30$   $^{14}\text{C}$  yr ( $\pm 0.3$  pMC).

To achieve greater precision, multiple measurements can be made on the same sample to calculate a weighted average age and error. Additional fees are charged for this service, as it requires different portions of the same sample to be pretreated, graphitized, and AMS counted independently of each other.

We are happy to include calibrated calendar ages in your report. There is no charge for this service.
